

What's New in MVP Live?

MVP Live is still the same eligibility verification solution you love, but with the latest updates it has even more functional features. You will notice a cleaner design developed to make your experience more enjoyable and efficient. Rows now highlight as you move your cursor to help you focus on a particular transaction. We have also introduced even more ways to filter your results so you can find exactly what you need.

The new MVP's biggest change was to the technology the service operates on. This technology improves system performance and in certain instances may speed up transaction processing by automatically posting status updates without the need for a page refresh.

New Look

The visual changes may not seem drastic because we have kept all of the original MVP's functionality; however, we hope you notice a cleaner and more user-friendly interface. Filtering and visual effects have also been added to help you focus on the important things.

The **Requests** tab will replace the **Active** and **Today** tabs. On this tab, you will see all transactions from the last four days - up to 5,000 transactions. As you move your cursor over the page, MVP Live will highlight requests so you can focus on what you are working on.

The **Payers** column has now been separated from the date column in the original MVP Live. Filtering this column can clue you into payer specific behavior.

In the new MVP Live, you can click any column heading to sort in ascending or descending order. Our type and filter boxes on the **Requests** tab will automatically refine your results to a smaller list as you type.

New Technology

While you will first notice the clean design, you can be assured that the technology MVP now operates on is optimized for real-time transactions. This technology will automatically alert you to status changes by a color flash and will no longer require the you to refresh the page to view the most updated status.

When a new transaction is first sent, a new row will appear and will flash blue. As the transaction updates with a new status, the transaction entry will flash yellow.

About eSolutions

eSolutions specializes in helping health care providers improve revenue cycle management practices. Our team members have spent years learning the intricacies of the Medicare system; it's through this knowledge that we've developed some of the industry's workflow automation and data analytics tools. For more information, visit us at www.esolutionsinc.com.
